

Project Reflection

Please prepare a short document (~1 paragraph to 1-2 pages) that addresses:

From a process point of view, what went well? What could you improve? Other possible reflection topics: Was your project appropriately scoped? Did you have a good plan for unit testing? How will you use what you learned going forward? What do you wish you knew before you started that would have helped you succeed?

This mini-project was very interesting to code. It provided me with a brief overview of lambda functions, that I tried using in my code. I had never used or learned about them prior to working on this project. Ideally I would have tried implementing the code on paper before starting to code to get a better understanding of the mechanics behind it.
