Computational Art Project Reflection

Throughout the course of the project I learned a lot about recursion and imaging. There were several difficult points but overall I learned a lot and can now make better use of recursion techniques. Before, I was a bit lost on how to generate the same type of indices as we used for “for” loops. This project helped me reorient myself to think about indexing differently by changing the call of the function itself. In this way recursion has become much less of a scary black box and more of an approachable and useful tool. However, I definitely would like to further familiarize myself with this concept so I can apply it more eloquently.

Going forward I would like to focus myself earlier so I can more fully explore (and refine) my code and its intricacies. While I now have a decent grip on the concepts of this project, I think that further study and going through more examples online can help me.
